²⁰¹⁷ **AMC 12B**

DO NOT OPEN UNTIL WEDNESDAY, February 15, 2017

Administration On An Earlier Date Will Disqualify Your School's Results

- 1. All information (Rules and Instructions) needed to administer this exam is contained in the Teachers' Manual. PLEASE READ THE MANUAL BEFORE FEBRUARY 15, 2017.
- 2. Your PRINCIPAL or VICE-PRINCIPAL must verify on the AMC 12 CERTIFICATION FORM (found on **amc.maa.org** under 'AMC 10/12') that you followed all rules associated with the conduct of the exam.
- 3. The Answer Forms must be mailed by trackable mail to the AMC office no later than 24 hours following the exam.
- 4. The publication, reproduction or communication of the problems or solutions for this contest during the period when students are eligible to participate seriously jeopardizes the integrity of the results. Dissemination at any time via copier, telephone, email, internet, or media of any type is a violation of the competition rules.

INSTRUCTIONS

- 1. DO NOT OPEN THIS BOOKLET UNTIL YOUR PROCTOR TELLS YOU.
- 2. This is a 25-question multiple-choice test. Each question is followed by answers marked A, B, C, D, and E. Only one of these is correct.
- 3. Mark your answer to each problem on the AMC 10 Answer Form with a #2 pencil. Check the blackened circles for accuracy and erase errors and stray marks completely. Only answers properly marked on the answer form will be graded. **No copies.**
- 4. SCORING: You will receive 6 points for each correct answer, 1.5 points for each problem left unanswered, and 0 points for each incorrect answer.
- 5. No aids are permitted other than scratch paper, graph paper, rulers, compass, protractors, and erasers. No calculators, smartwatches, phones, or computing devices are allowed. No problems on the test will require the use of a calculator.
- 6. Figures are not necessarily drawn to scale.
- 7. Before beginning the test, your proctor will ask you to record certain information on the answer form.
- 8. When your proctor gives the signal, begin working on the problems. You will have **75 minutes** to complete the test.
- 9. When you finish the exam, sign your name in the space provided on the Answer Form.

The Committee on the American Mathematics Competitions (CAMC) reserves the right to re-examine students before deciding whether to grant official status to their scores. The CAMC also reserves the right to disqualify all scores from a school if it is determined that the required security procedures were not followed.

Students who score well on this AMC 10 will be invited to take the 35th annual American Invitational Mathematics Examination (AIME) on Thursday, March 7, 2017 or Wednesday, March 22, 2017. More details about the AIME are on the back page of this test booklet.

The publication, reproduction or communication of the problems or solutions for this competition during the period when students are eligible to participate seriously jeopardizes the integrity of the results. Dissemination at any time via copier, telephone, email, internet, or media of any type is a violation of the competition rules.

1. Kymbrea's comic book collection currently has 30 comic books in it, and she is adding to her collection at the rate of 2 comic books per month. LaShawn's collection currently has 10 comic books in it, and he is adding to his collection at the rate of 6 comic books per month. After how many months will LaShawn's collection have twice as many comic books as Kymbrea's?

(A) 1 (B) 4 (C) 5 (D) 20 (E) 25

2. Real numbers x, y, and z satisfy the inequalities

0 < x < 1, -1 < y < 0, and 1 < z < 2.

Which of the following numbers is necessarily positive?

(A)
$$y + x^2$$
 (B) $y + xz$ (C) $y + y^2$ (D) $y + 2y^2$
(E) $y + z$

3. Suppose that x and y are nonzero real numbers such that

$$\frac{3x+y}{x-3y} = -2.$$

What is the value of

$$\frac{x+3y}{3x-y}?$$

$$(A) -3 (B) -1 (C) 1 (D) 2 (E) 3$$

4. Samia set off on her bicycle to visit her friend, traveling at an average speed of 17 kilometers per hour. When she had gone half the distance to her friend's house, a tire went flat, and she walked the rest of the way at 5 kilometers per hour. In all it took her 44 minutes to reach her friend's house. In kilometers rounded to the nearest tenth, how far did Samia walk?

5. The data set [6, 19, 33, 33, 39, 41, 41, 43, 51, 57] has median $Q_2 = 40$, first quartile $Q_1 = 33$, and third quartile $Q_3 = 43$. An outlier in a data set is a value that is more than 1.5 times the interquartile range below the first quartile (Q_1) or more than 1.5 times the interquartile range above the third quartile (Q_3) , where the interquartile range is defined as $Q_3 - Q_1$. How many outliers does this data set have?

WRITE TO US!

Correspondence about the problems and solutions for this AMC 12 and orders for publications should be addressed to:

MAA American Mathematics Competitions PO Box 471 Annapolis Junction, MD 20701 Phone 800.527.3690 | Fax 240.396.5647 | amcinfo@maa.org

The problems and solutions for this AMC 12 were prepared by MAA's Subcommittee on the AMC10/AMC12 Exams, under the direction of the co-chairs Jerrold W. Grossman and Carl Yerger.

2017 AIME

The 35th annual AIME will be held on Thursday, March 7, 2017 with the alternate on Wednesday, March 22, 2017. It is a 15-question, 3-hour, integer-answer exam. You will be invited to participate if you achieve a high score on this competition. Top-scoring students on the AMC 10/12/ AIME will be selected to take the 46th Annual USA Mathematical Olympiad (USAMO) on April 19–20, 2017. The best way to prepare for the AIME and USAMO is to study previous exams. Copies may be ordered as indicated below.

PUBLICATIONS

A complete listing of current publications, with ordering instructions, is at our web site: www.maa.org/amc

(A) 0 (B) 1 (C) 2 (D) 3 (E) 4

21. Last year Isabella took 7 math tests and received 7 different scores, each an integer between 91 and 100, inclusive. After each test she noticed that the average of her test scores was an integer. Her score on the seventh test was 95. What was her score on the sixth test?

(A) 92 (B) 94 (C) 96 (D) 98 (E) 100

22. Abby, Bernardo, Carl, and Debra play a game in which each of them starts with four coins. The game consists of four rounds. In each round, four balls are placed in an urn—one green, one red, and two white. The players each draw a ball at random without replacement. Whoever gets the green ball gives one coin to whoever gets the red ball. What is the probability that, at the end of the fourth round, each of the players has four coins?

(A)
$$\frac{7}{576}$$
 (B) $\frac{5}{192}$ (C) $\frac{1}{36}$ (D) $\frac{5}{144}$ (E) $\frac{7}{48}$

23. The graph of y = f(x), where f(x) is a polynomial of degree 3, contains points A(2,4), B(3,9), and C(4,16). Lines AB, AC, and BC intersect the graph again at points D, E, and F, respectively, and the sum of the x-coordinates of D, E, and F is 24. What is f(0)?

(A)
$$-2$$
 (B) 0 (C) 2 (D) $\frac{24}{5}$ (E) 8

24. Quadrilateral *ABCD* has right angles at *B* and *C*, $\triangle ABC \sim \triangle BCD$, and AB > BC. There is a point *E* in the interior of *ABCD* such that $\triangle ABC \sim \triangle CEB$ and the area of $\triangle AED$ is 17 times the area of $\triangle CEB$. What is $\frac{AB}{BC}$?

(A) $1 + \sqrt{2}$ (B) $2 + \sqrt{2}$ (C) $\sqrt{17}$ (D) $2 + \sqrt{5}$ (E) $1 + 2\sqrt{3}$

25. A set of n people participate in an online video basketball tournament. Each person may be a member of any number of 5-player teams, but no two teams may have exactly the same 5 members. The site statistics show a curious fact: The average, over all subsets of size 9 of the set of n participants, of the number of complete teams whose members are among those 9 people is equal to the reciprocal of the average, over all subsets of size 8 of the set of n participants, of the number of complete teams whose members are among those 9 people is equal to the reciprocal of the number of complete teams whose members are among those 8 people. How many values $n, 9 \le n \le 2017$, can be the number of participants?

2017 AMC 12B Problems

6. The circle having (0,0) and (8,6) as the endpoints of a diameter intersects the x-axis at a second point. What is the x-coordinate of this point?

(A)
$$4\sqrt{2}$$
 (B) 6 (C) $5\sqrt{2}$ (D) 8 (E) $6\sqrt{2}$

7. The functions $\sin(x)$ and $\cos(x)$ are periodic with least period 2π . What is the least period of the function $\cos(\sin(x))$?

(A)
$$\frac{\pi}{2}$$
 (B) π (C) 2π (D) 4π (E) It's not periodic.

8. The ratio of the short side of a certain rectangle to the long side is equal to the ratio of the long side to the diagonal. What is the square of the ratio of the short side to the long side of this rectangle?

(A)
$$\frac{\sqrt{3}-1}{2}$$
 (B) $\frac{1}{2}$ (C) $\frac{\sqrt{5}-1}{2}$ (D) $\frac{\sqrt{2}}{2}$ (E) $\frac{\sqrt{6}-1}{2}$

9. A circle has center (-10, -4) and radius 13. Another circle has center (3,9) and radius √65. The line passing through the two points of intersection of the two circles has equation x + y = c. What is c?

(A) 3 (B)
$$3\sqrt{3}$$
 (C) $4\sqrt{2}$ (D) 6 (E) $\frac{13}{2}$

10. At Typico High School, 60% of the students like dancing, and the rest dislike it. Of those who like dancing, 80% say that they like it, and the rest say that they dislike it. Of those who dislike dancing, 90% say that they dislike it, and the rest say that they like it. What fraction of students who say they dislike dancing actually like it?

(A) 10% (B) 12% (C) 20% (D) 25% (E) $33\frac{1}{3}\%$

11. Call a positive integer *monotonous* if it is a one-digit number or its digits, when read from left to right, form either a strictly increasing or a strictly decreasing sequence. For example, 3, 23578, and 987620 are monotonous, but 88, 7434, and 23557 are not. How many monotonous positive integers are there?

(A) 1024 (B) 1524 (C) 1533 (D) 1536 (E) 2048

12. What is the sum of the roots of $z^{12} = 64$ that have a positive real part?

(A) 2 (B) 4 (C)
$$\sqrt{2} + 2\sqrt{3}$$
 (D) $2\sqrt{2} + \sqrt{6}$
(E) $(1 + \sqrt{3}) + (1 + \sqrt{3})i$

13. In the figure below, 3 of the 6 disks are to be painted blue, 2 are to be painted red, and 1 is to be painted green. Two paintings that can be obtained from one another by a rotation or a reflection of the entire figure are considered the same. How many different paintings are possible?

14. An ice-cream novelty item consists of a cup in the shape of a 4-inchtall frustum of a right circular cone, with a 2-inch-diameter base at the bottom and a 4-inch-diameter base at the top, packed solid with ice cream, together with a solid cone of ice cream of height 4 inches, whose base, at the bottom, is the top base of the frustum. What is the total volume of the ice cream, in cubic inches?

(A)
$$8\pi$$
 (B) $\frac{28\pi}{3}$ (C) 12π (D) 14π (E) $\frac{44\pi}{3}$

15. Let ABC be an equilateral triangle. Extend side \overline{AB} beyond B to a point B' so that BB' = 3AB. Similarly, extend side \overline{BC} beyond C to a point C' so that CC' = 3BC, and extend side \overline{CA} beyond Ato a point A' so that AA' = 3CA. What is the ratio of the area of $\triangle A'B'C'$ to the area of $\triangle ABC$?

$$(A) 9:1 (B) 16:1 (C) 25:1 (D) 36:1 (E) 37:1$$

16. The number 21! = 51,090,942,171,709,440,000 has over 60,000 positive integer divisors. One of them is chosen at random. What is the probability that it is odd?

(A)
$$\frac{1}{21}$$
 (B) $\frac{1}{19}$ (C) $\frac{1}{18}$ (D) $\frac{1}{2}$ (E) $\frac{11}{21}$

2017 AMC 12B Problems

17. A coin is biased in such a way that on each toss the probability of heads is $\frac{2}{3}$ and the probability of tails is $\frac{1}{3}$. The outcomes of the tosses are independent. A player has the choice of playing Game A or Game B. In Game A she tosses the coin three times and wins if all three outcomes are the same. In Game B she tosses the coin four times and wins if both the outcomes of the first and second tosses are the same and the outcomes of the third and fourth tosses are the same. How do the chances of winning Game A compare to the chances of winning Game B?

(A) The probability of winning Game A is $\frac{4}{81}$ less than the probability of winning Game B.

(B) The probability of winning Game A is $\frac{2}{81}$ less than the probability of winning Game B.

(C) The probabilities are the same.

(D) The probability of winning Game A is $\frac{2}{81}$ greater than the probability of winning Game B.

(E) The probability of winning Game A is $\frac{4}{81}$ greater than the probability of winning Game B.

18. The diameter \overline{AB} of a circle of radius 2 is extended to a point D outside the circle so that BD = 3. Point E is chosen so that ED = 5 and line ED is perpendicular to line AD. Segment \overline{AE} intersects the circle at a point C between A and E. What is the area of $\triangle ABC$?

(A)
$$\frac{120}{37}$$
 (B) $\frac{140}{39}$ (C) $\frac{145}{39}$ (D) $\frac{140}{37}$ (E) $\frac{120}{31}$

19. Let N = 123456789101112...4344 be the 79-digit number that is formed by writing the integers from 1 to 44 in order, one after the other. What is the remainder when N is divided by 45?

$$(A) 1 (B) 4 (C) 9 (D) 18 (E) 44$$

20. Real numbers x and y are chosen independently and uniformly at random from the interval (0, 1). What is the probability that $\lfloor \log_2 x \rfloor = \lfloor \log_2 y \rfloor$, where $\lfloor r \rfloor$ denotes the greatest integer less than or equal to the real number r?

(A)
$$\frac{1}{8}$$
 (B) $\frac{1}{6}$ (C) $\frac{1}{4}$ (D) $\frac{1}{3}$ (E) $\frac{1}{2}$
